

Java Developer — Member

SUMMARY

We're looking for someone to join a collaborative, fast-paced team working on APIs/services that drive customer journeys on our gaming sites. You're an experienced software engineer who will bring your ideas about microservices architecture, Agile ways-of-working, and a devops approach.

We're a friendly and learning-oriented team, with regular lunches, mob programming sessions, boardgames & drinks in the great social spaces of our Piccadilly Circus office.

THE ROLE & OPPORTUNITY

- Design, build and ship software from inception to production
- Contribute to our Agile/Scrum journey, working closely with your cross-functional team & driving an incremental approach
- Mentor & coach fellow engineers, championing development best practices
- Lots of great people to learn from, both within and beyond your team

TECHNOLOGY & WAYS-OF-WORKING

- We use Java 7/8 in our large-scale systems and modern microservices
- We're experimenting and modernising our platform with new tech like Spring Boot, Docker, GoCD, Apigee, Ansible, React JS, Google Cloud Platform & Kubernetes
- We're adopting Agile/XP practices like pairing, TDD, BDD, incremental delivery and continuous improvement

WE ALSO LOVE OUR...

- Fantastic Central London office, overlooking Piccadilly Circus
- Nespresso machines!
- Diverse, friendly team — meet people from many different nationalities & backgrounds
- Social culture — clubs (football, board games, craft beer, etc), Friday drinks and regular company events

Player Services

Player Services provides the central services leveraged by the rest of the company to help deliver our award winning games and legendary customer service. Player Services is at an exciting point in its development, using frameworks such as React and Node.js to deliver mobile-first, responsively designed websites and tools such as Apigee to create a series of versioned APIs to deliver services such as Payment Processing, real-time in-game offer generation and real-time fraud detection. In these areas we are using modern technologies like Cassandra, Neo4J, Hazelcast and Docker to deliver those services in some innovative ways.

We have great teams of enthusiastic and talented developers, developers in test and QA engineers and want more people like them. We'll do our best to get out of your way so that you can get on with your job while providing encouragement, coaching and an Agile support team of Product Owners, Project Managers and Development Managers. If the following things excite you then so will working with us - mobile gaming, multi-device, web technologies, high-availability/scalability, micro-services, restful APIs and smart talented people.

About Us

We are on a mission to become the world's most entertaining online gaming company. It all started with Jackpotjoy but along the way we have grown into the award-winning team of designers, developers and operators behind some of the leading gaming sites and apps including Virgin Games and Caesar's Casino. But, we haven't stopped there... we're also behind Bingo Lane, Jackpotjoy Slots and other great free-to-play games.

Born in 2001 with just a handful of developers, we are now over 900 employees strong across 7 group offices worldwide with our headquarters in Central London. Over 24 million players enjoy our 258 games, generating on average 6,028 chat messages every 15 minutes!

Whether it be through the awards we've won for innovation in Bingo and Slots, our commitment to using cutting edge technology, or simply our passion to innovate, thrill, and surprise, Gamesys constantly pushes the boundaries to be the best in class.

Our culture is visible everywhere. Visit our reception - you'll find sweets and a giant monkey, in the design team a giant red lamp and the latest quad core mac pros; the breakout areas a Gamesys pool table and fridges full of beer, wine and soft drinks. In the meeting rooms you might find grass instead of carpet, in the summer you'll meet all our families together for a celebration and in the winter you can find Mexican wrestlers or circus acts roaming around. Weekly social and sports events give you the opportunity to stretch both your mind and body, whether it be getting involved in a meetup or brownbag session, playing in the poker tournament or joining one of the many sports teams. But our

culture is not just in what you can see it's in everything we do, we're hard workers and we get stuck in. We have fun, making fun and our vision is to invent, play and discover together, to craft experiences that thrill our players and rock the world.
